

The Free Software Foundation's "Respects Your Freedom" computer hardware product certification program encourages the creation and sale of hardware that will do as much as possible to respect your freedom and your privacy, and will ensure that you have control over your device.

ThinkPenguin, Inc. was founded with the goal of making free software more easily adoptable by the masses. Today I'm proud to say we are one step closer in achieving that goal. Not only do we have a product catalog that works with free software, but there is a reputable certification process to help users distinguish the good from the bad.

Christopher Waid, Founder and CEO ThinkPenguin, Inc.,
From the press release announcing certification of the
ThinkPenguin USB Wifi adapter.

Apply for Respects Your Freedom certification

Companies interested in getting RYF certification for a given hardware product (digital devices, computers, components for computers, and computer-controlled devices) should review our general guidelines for certification. If you have any questions or believe you have a product eligible for certification, please contact ryf@fsf.org.

A company whose product is certified will be eligible to:

- display the Respects Your Freedom certification mark on the certified product's packaging, marketing, and other materials,
- use the FSF name and the Respects Your Freedom certification program name in press releases and advertising, including quotes from FSF executives,
- promotion through the FSF's own channels, either jointly with your own or separately.
